

MediaPie

Peer-to-peer social media radio

Concept. A simple gadget can become a Internet-based media center

Everyone is a radio station

Functions (user view with a panel)

Now playing:
Channel 中国新闻

Functions(User view with a display)

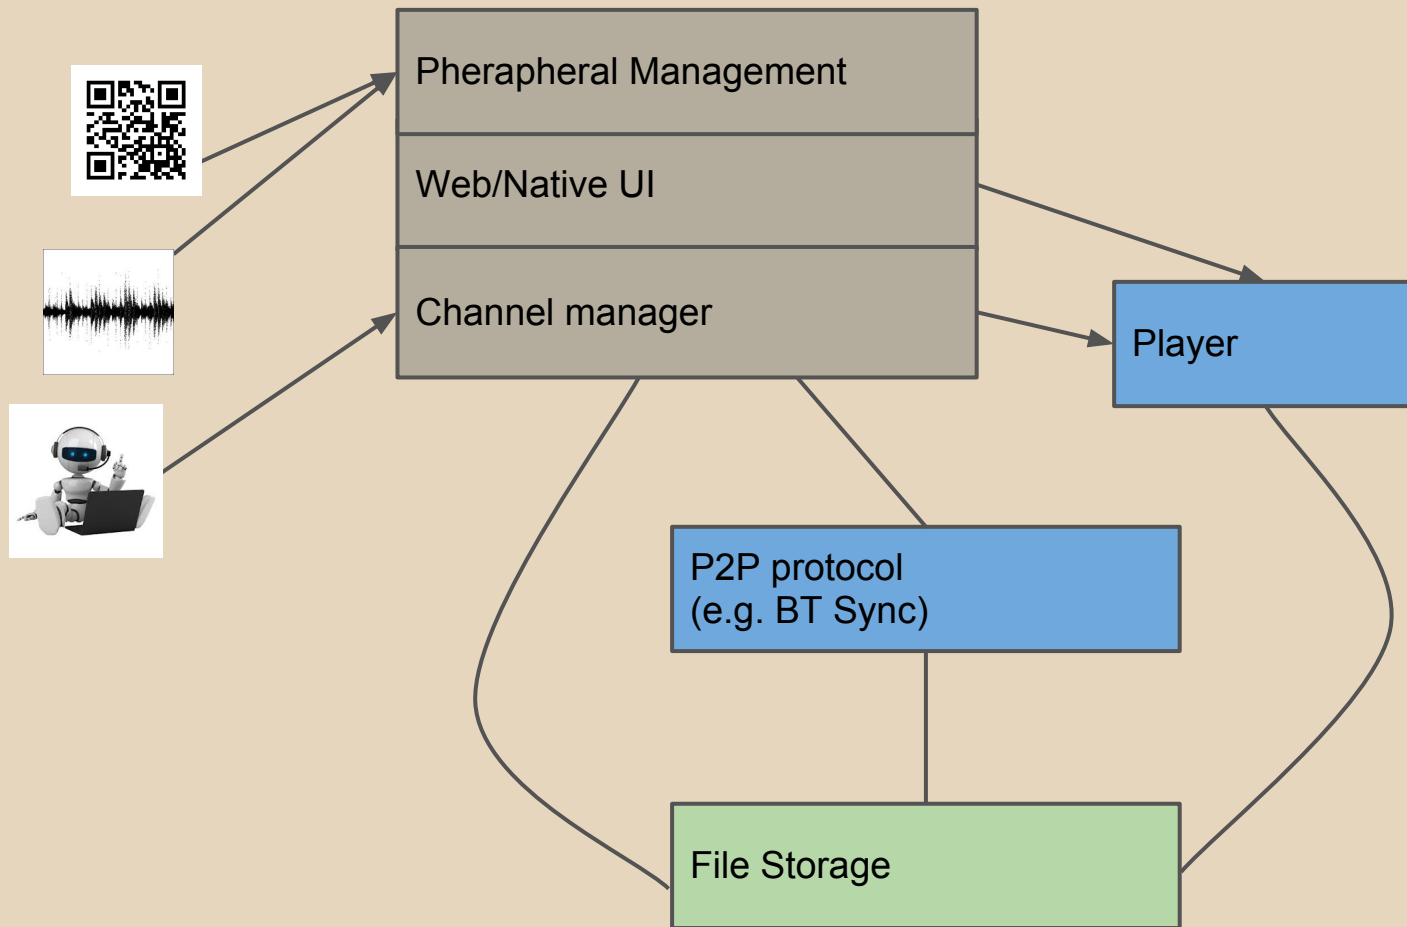

Functions(user view with mobile remote)

HTML5 UI (device neutral)

- add new channel
- select channel
- playback(shuffle,new,etc)
- favorite (archive)
- create/share channel (based on favorites)
- system information(storage, network, etc.)

Architecture

Local Data Storage Structure

```
--- My station
---RM3GRQKX4Z25LO73YNSHDOFKER5AVSTIJ
|----- station.xml
|----- station.jpg //size/ratio defined
|----- /data folder
---TKXSVDDW644QIHGTAM5YMSD34JRIIRNO
|----- station.xml
|----- station.jpg //size/ratio defined
|----- /data folder
```

Station Metadta (station.xml)

```
<station>
```

```
  <name>天籁之音</name>
```

```
  <curator>Cherry</curator>
```

```
  <timeZone>GMT-8</timeZone>
```

```
  <secret>RM3GRQKX4Z25LO73YNSHDOFKER5  
AVSTIJ
```

```
  </secret>
```

```
  <info>这是我多年收集的最好听的歌声  
</info>
```

```
</station>
```

Modules

- `player.py` --- manage playback
- `pybtsync.py` ---- python module to access BT Sync, managing the uploading/downloading of media files
- (coming) UI modules
- (coming) communication with "Me" project

Scenarios
